Reading a quarter of another model's memory gets a model 78% of the way to having read the text itself

Model A reads half of a chat

Part 1: A user **asked** you: What specific skills **and** techniques are required for **individuals** to contribute effectively to a **collaborative** creative process? You answered**:** Contributing effectively to a **collaborative** creative process requires a combination **of** interpersonal skills, technical expertise**,** and creative thinking. **Here**'s a breakdown of the **specific** skills and techniques that individuals **need** to succeed in such environments**:** --- ### **1. **Communication** Skills** - ...

Model B gets the memory (KV cache) of the gold tokens only

Model B never sees the text

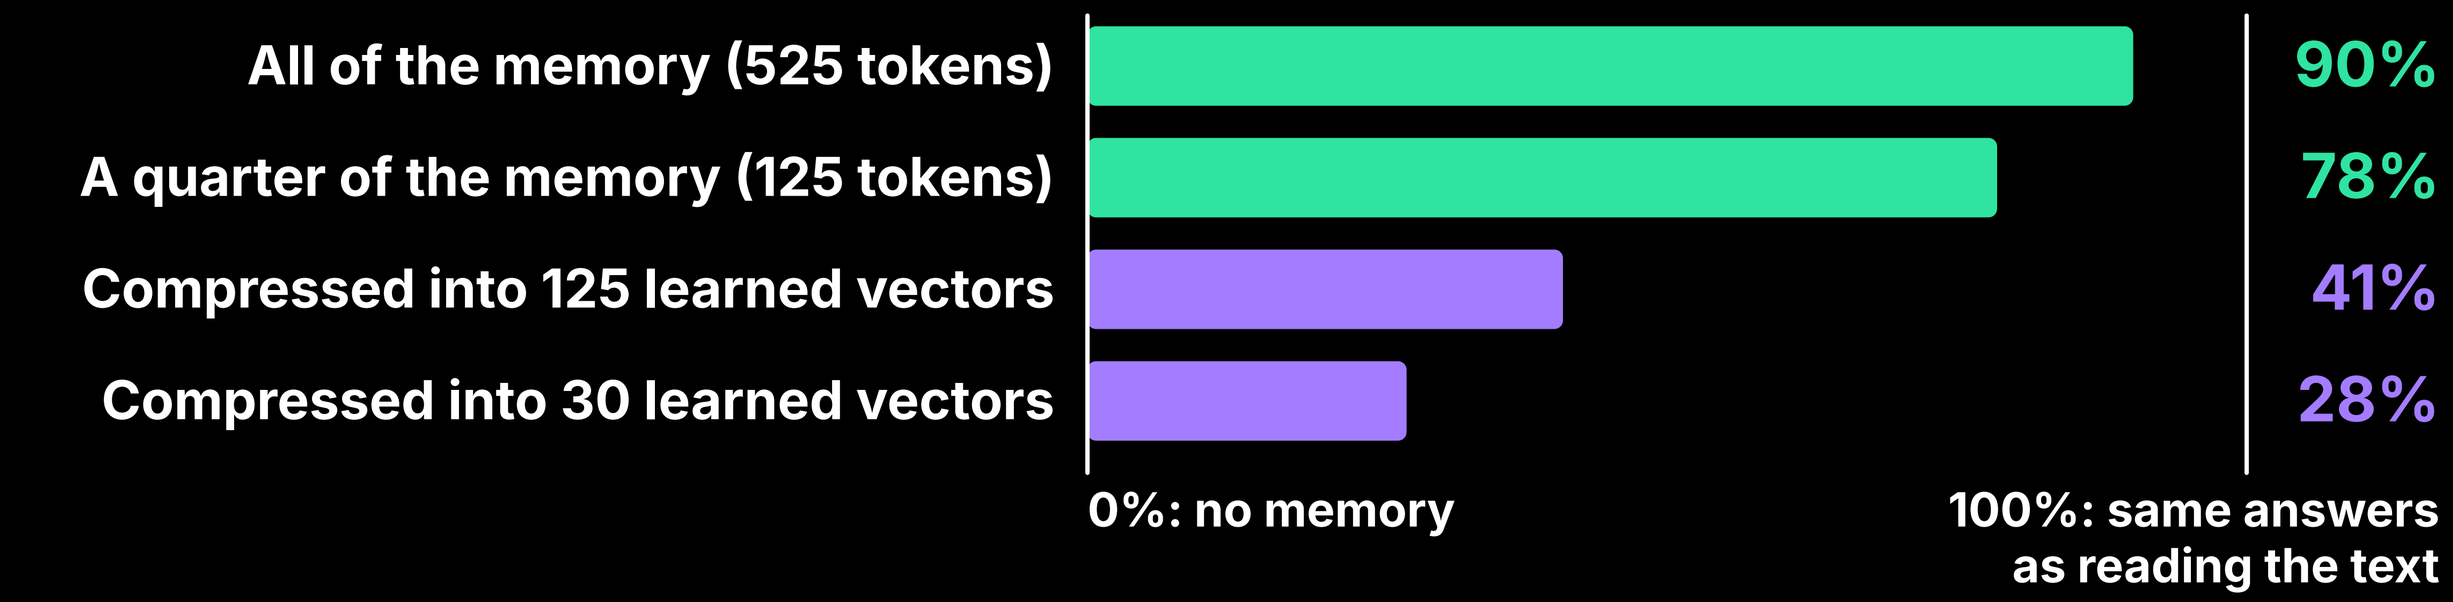

A user asks Model B:

"These are some great skills to have. Do you have any tips on how to improve them?"

Goal: answer like a model with the whole chat:

"Absolutely! Improving your skills in communication, collaboration, and ...

How close Model B's answers get

Two copies of Qwen3-1.7B on a mix of chats, documents and code, measured during training. On real chats alone, the 125 learned vectors reach 18%; the quarter of the memory is still being tested.
